

# EPA ENERGY STAR Buildings Special Report

Featured in the February issue of *Building Operating Management*, this report will address the following:

A variety of factors — including volatile prices and rising concerns about climate change — will combine to make energy a more critical issue for corporations in the future. Some leading companies are already preparing for the high-risk energy future. Their strategies — documented in a report produced by ENERGY STAR and the Global Business Network titled “Energy Strategy for the Road Ahead” — amount to best practices for getting a head start on the challenges all companies are likely to face. This article will analyze those strategies and provide tips on how to implement them.

Topics to include:

- Future energy scenarios
- Business risks resulting from rising energy costs
- How businesses can meet the energy challenges of the future

Reach 73,000 Commercial and Institutional Building Owners and Facility Executives!

## PLUS SPECIAL BONUS

- All advertisers appear on BOM on-line
- Bonus distribution at National Facility Management & Technology Conference & Expo
